

Chinmayee Settipalli

Professional Summary

Full Stack Developer with 2+ years of experience building responsive and scalable web applications using React.js, JavaScript, TypeScript, HTML5, CSS3, and Tailwind CSS. Experienced in developing backend services, RESTful APIs, and reusable APIs that can be integrated with other applications using Node.js and Express.js. Skilled in PostgreSQL, MongoDB, AI-powered features, GPT-based models, and third-party API integrations. Passionate about building intuitive user interfaces, seamless user experiences, and reliable end-to-end solutions that solve real-world business requirements.

Skills

- **Front-End:** React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3
- **Back-End & AI Integration:** Node.js, Express.js, PHP, JWT, Pinecone (Basic Indexing), GPT-based Models
- **Databases:** PostgreSQL, MongoDB
- **Cloud & DevOps:** Docker, AWS Bedrock
- **Tools & Methodologies:** Git, GitHub, VS Code, REST APIs

Professional Experience

I. **NUS TTS – Phase-5** | HTML5, CSS3, JavaScript, MySQL, PHP

NUS Trade Tracking System (NUS Consulting Group) – An energy trading and contract management platform designed to streamline trade tracking, contract management, and dynamic energy reporting. Contributed to the platform's progressive enhancement across multiple phases by developing and improving features that strengthened user experience, reporting accuracy, data management, and overall workflow efficiency.

Worked on report visualization and graph alignment, ensuring charts and graphical elements were accurately positioned and consistently presented across reports.

II. **SyndicationX** | React.js, Node.js, Express.js, MongoDB, Pinecone, Docker

SyndicationX is a real estate investment platform that connects syndicators and investors, enabling them to manage deals, investments, contacts, and investor relationships in one place. It streamlines the complete deal lifecycle, from investor onboarding and deal management to distributions and reporting

- Worked on real estate investment workflows, including deal lifecycle, investor/LP, syndicator/GP, contacts, and organization management.
- Defined and validated business processes, integrations, and platform enhancements such as CRM, payments, e-sign, billing, and data migration.
- Coordinated with stakeholders and development teams to translate business requirements into functional features and validate delivered solutions.

III. **AI-Q (AI Evaluation Platform) and AI Risk Intellect** | React.js, TypeScript, Vite, Node.js, Express.js, PostgreSQL, Drizzle ORM, FastAPI, AWS Bedrock

AI-Q is an AI risk assessment and vendor intelligence platform that evaluates organizations and AI systems across security, compliance, and AI risk domains. It helps organizations assess vendor risk, generate risk scores, and make informed decisions through automated AI-driven analysis.

- Gathered requirements and prepared PRDs, workflows, testing documents, and implementation specifications for the AI-Q platform.
- Coordinated development and testing of AI risk assessment, vendor scoring, attestation, and AI model-related features.
- Managed client feedback, defect tracking, deployment coordination, and validation of scoring and risk-assessment functionality.
